In 2024, China produced 80% of the world's solar panels and remains by far the largest exporter. Africa's dependence on imports is heavy because local manufacturing capacity is still minimal.

Imports from China may account for the bulk of solar sold in Africa, but the report also highlights growth in PV manufacturing capacity across the continent.

An analysis of Chinese export data by British renewable energy think tank Ember indicates a massive influx of solar equipment in Africa. Over just 12 months, China shipped solar...

According to a new analysis of China's solar panel exports data from energy think tank Ember, solar panel imports into the continent jumped 60% in the 12 months through June 2025,...

The clean energy research body Ember published a report yesterday detailing Chinese solar exports to the continent. It uses Chinese customs data to show a marked year-on-year increase ...

Africa is emerging as the world's fastest-growing solar market, with China playing a critical role in the process, according to a new report by the African Solar Industry Association, or ...

For now, Africa remains almost entirely reliant on foreign suppliers. China accounts for 85-90% of installations, and dominance extends well beyond panels to batteries, inverters and ...

China's solar exports to Africa are surging. Over the course of the past year, Chinese companies shipped out solar equipment to a vast range of countries on the continent, according...

This week, analysts at Ember Research published a study of Chinese customs data on solar panel exports to Africa -- a good proxy for solar development on the continent, which imports...

That is according to a new analysis of China's solar panel exports data from energy think tank Ember. "The

China exports solar modules to Africa

take-off of solar in Africa is a pivotal moment," said Dave Jones, Ember's chief ...
