The United States is experiencing an unprecedented surge in solar and battery storage capacity, fundamentally reshaping its power grid.

With the first three months of data in for 2025, it's clear this year is no exception: Solar power is up a staggering 44 percent compared to the prior year. That's the good news. The bad ...

US energy storage set a Q1 record in 2025 with 2 GW added, but looming policy changes could put that growth at serious risk.

Even as the Trump administration rolled out anti-clean energy policies, solar and storage still made up 82% of all new power added to the grid in the first six months of the year. But the growth...

Recently, the Energy Information Administration (EIA) of the US Department of Energy predicted that by 2025, utility scale solar capacity will reach 32.5GW, energy storage capacity will be slightly higher ...

"This quarter showed massive growth compared to year-ago levels and the grid-scale segment continues to be the main driver," said Vanessa Witte, senior analyst with Wood Mackenzie ...

According to the American Clean Power Association's (ACP) and Wood Mackenzie's latest U.S. Energy Storage Monitor report released today, Q3 set the highest record for third-quarter ...

The landscape of energy in the United States is undergoing a significant transformation, with solar power and energy storage poised for remarkable growth by 2025.

The solar PV and energy storage sectors are witnessing unprecedented growth, guided by substantial investments and a surge in installations.

Comments on the surge in photovoltaic energy storage

The surge in battery attachments underscores Sunrun's shift away from solar-only installations and toward energy storage systems that can provide a reliable source of power during ...
