For efficient ventilation, the air inlet/outlet opening should be of suitable dimensions (Figure 2). Louvers should be fitted to the windows to protect the air outlets.

This article explains, in simple, human terms, the whole idea behind generator and transformer room ventilation. It also shows how the design sheet helps you choose the right airflow, ...

The air inlet must be capable of moving enough air through the room to provide the correct minimum CFM (cubic feet per minute) cooling for generator as specified by the generator's manufacturer.

In this white paper, CFD has been utilized to look at the influences of walls near generator enclosures as well as the influence of prevailing winds.

(1) openings in walls of a smoke extract shaft, or a return air shaft which also serves as a smoke extract shaft, or (2) openings in walls of a protected shaft when the openings have a kitchen exhaust duct ...

When designing the air intake and exhaust of diesel generator room, we should pay attention to the matters which mentions in this article.

Locate air inlet, ventilation and air outlet openings in a structure so that already exhausted air will not be drawn back into the building. Louvers, screening, expanded metal and other materials used to cover ...

the manufacturer had to consider the same airflow requirements for indoor applications. This information sheet discusses the design requirements for generator system enclosures, the different types of ...

This document provides calculations for sizing ventilation requirements for a generator room and transformer room. It calculates heat loads, required airflow, and intake/exhaust area sizes for ...
