One of the key aspects of the test is to determine both the safety and efficiency of collecting solar energy in space, transmitting it through the atmosphere, and then producing a usable ...

The study assumes an extraterrestrial civilization would make use of solar energy from its host star; of course, aliens might use any number of power sources, including those beyond the...

Somewhere in the galaxy, an advanced alien civilization might ...

A team of researchers from NASA wondered whether it would be possible, with existing technology, to find a civilization using large arrays of solar panels to supply its energy needs.

The technology's proponents claim that a solar-power plant in Earth's orbit would produce 13 times more power than an equivalent installation located in the notoriously cloudy U.K.

The new study assumes aliens would build solar panels out of silicon. That's because it's relatively abundant compared to other elements used in solar power, such as germanium, gallium or...

So I'm currently writing a RPG campaign with a spacefaring species and I was wondering if you could genetically engineer cells to be able to use electricity instead of ATP as an energy source?

Unsatisfied with starlight and ion engines, humanity had decided to recreate a star's fusion and power their cities and starships directly, as well as using it for propulsion.

The demo delivered just 2 kilowatts over 36 meters, but it raised a serious question: Is it time to resurrect a scheme long derided as science fiction and launch giant satellites to collect solar ...

Somewhere in the galaxy, an advanced alien civilization might harness energy from its star. And NASA wants

Do aliens generate electricity with solar energy Zhihu

to know if it could detect this activity. The space agency has some powerful...

The researchers also assume that a hypothetical extraterrestrial civilization would rely exclusively on solar energy. However, if other sources of energy are used, such as nuclear fusion, it ...
