You know what M.D. means, but what does D.O. mean? What's different and what's alike between these two kinds of health care providers?

Brain MRI is one of the tests you may have to determine the cause of headaches, dizziness, seizures, vision problems or hearing loss. This painless imaging test is used to ...

The National Cancer Institute states that non-ionizing EMF radiation - the type produced by solar systems - lacks sufficient energy to damage DNA directly. This fundamental physics ...

High-energy particle radiation can cause severe degradation in the space PV system. When the particles penetrate a material, they are slowed down due to the interaction with the orbital electrons ...

Solar arrays for space are not subject to these effects, but instead have a different set of environmental hazards, including more extreme temperature cycles, particulate and ultraviolet radiation in space, ...

Face masks can help slow the spread of coronavirus disease 2019 (COVID-19). Learn about mask types, which masks to use and how to use them.

The best-performing photovoltaic cells achieve efficiencies exceeding 20%, which is crucial for space missions where power is at a premium. In space, the lack of atmosphere allows solar panels to ...

How Does it Work? Solar panel equipped, energy transmitting satellites collect high intensity, uninterrupted solar radiation by using giant mirrors to reflect huge amounts of solar rays onto smaller ...

Compared with a healthy liver (top), a fatty liver (bottom) appears bigger and discolored. Tissue samples show extra fat in fatty liver disease, while inflammation and ...

Do spacecraft photovoltaic panels emit radiation

To do this, find a quiet and comfortable space. Make sure you have time to fully focus on the exercises. They don't have to take much time, but you do need enough time to ...

Arthritis is a leading cause of pain and limited mobility worldwide. There's plenty of advice on managing arthritis and similar conditions with exercise, medicines and stress ...

No, solar panels do not emit harmful radiation that poses a risk to human health or the environment. They primarily absorb sunlight and convert it into electricity, functioning more like giant ...
