---

In reality, very little farmland is needed for solar projects and only 0.6% of existing farmland would be required for solar farms to power 45% of the American grid.

The safe and reliable installation of photovoltaic (PV) solar energy systems and their integration with the nation's electric grid requires timely development of the foundational codes and standards governing ...

Developing consistent, industry-wide standards to measure reliability in PV systems also facilitates widespread adoption of these technologies.

One has to wonder how they would react to the far greater environmental impacts their "green" energy future would bring. Will they be true to their convictions, or continue applying double...

Solar net metering programs, which credit utility customers for excess electricity that their rooftop solar array sends onto the distribution grid, have helped to drive distributed solar energy development ...

Recently, the United States has frequently accused China's new energy industry of providing a large amount of subsidies, while at the same time implementing exclusive and ...

The Solar ABCs is a centralized repository for collection and dissemination of documents, regulations, and technical materials related to solar codes and standards.

This Article highlights this "stranded costs double standard" and describes how state laws can better safeguard against it as utilities continue to seek to reform net metering programs in the coming years.

For example, using sun power to replace just the electricity from Virginia's nearly 24/7/365 Lake Anna Nuclear Generating Station would require nearly 20,000 acres of solar panels (twice the ...
