This chapter aims at providing a survey on the Base Stations functions and architectures, their energy consumption at component level, their possible improvements and the major problems ...

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for both ...

Various approaches have been proposed to reduce the energy consumption of an RBS, for instance, passive cooling techniques, energy-efficient backhaul solutions, and distributed base station design ...

By dynamically adjusting the transmitted power of base stations according to traffic loads, the paper contributes to the goal of sustainable communication technologies while maintaining service quality.

The present invention relates to an energy-saving method for a base station in a mobile communication system, in particular to a central base station with multiple processing units...

The chapter details modern energy-efficient technologies and methods of using renewable energy sources, the implementation of which is envisaged in the framework of the optimal ...

To further explore the energy-saving potential of 5 G base stations, this paper proposes an energy-saving operation model for 5 G base stations that incorporates communication caching and ...

The chapter details modern energy-efficient technologies and methods of using renewable energy sources, the implementation of which is ...

Therefore, in response to the impact of communication load rate on the load of 5G base stations, this paper proposes a base station energy storage auxiliary power grid peak shaving method based on ...

Energy method for repairing base stations in communication engineering

In view of the impact of changes in communication volume on the emergency power supply output of base station energy storage in distribution network fault areas, this paper introduces ...
