-----

In a historic milestone for clean energy, solar power became the leading source of electricity in the EU for the first time in June 2025. New data from energy think tank Ember reveals ...

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

Solar energy has established itself as one of the most dynamic pillars of Europe's energy transition. In recent years, its deployment has grown at a remarkable pace, driven by sustained cost ...

Explore Europe's 2024 solar boom, with gigawatt-scale projects in Germany, Spain, and beyond driving a historic shift in the continent's energy landscape.

At least 13 member states hit monthly solar power records, including the Netherlands (40.5 per cent) and Greece (35.1 per cent), thanks to a surge in capacity and a stretch of sunny ...

Copenhagen, Denmark, 2nd of February, 2026 - European Energy has inaugurated Northern Europe's largest combined solar and battery park in Kvosted, Denmark. The hybrid asset ...

The EU's electricity transition reached a new milestone in 2025 with wind and solar generating more power than fossil fuels.

The European solar market slows to 65.5 GW of new installations in 2024, marking just a 4% growth compared to 2023. Explore the challenges and future outlook for solar energy in Europe ...

Developers deployed 65.5 GW of solar across the European Union in 2024, according to SolarPower Europe's "EU Market Outlook for Solar Power 2024-2028." The figure reflects 4% annual...
