In this study, the frost jacking characteristics of steel pipe screw piles for photovoltaic support foundations in high-latitude and low-altitude regions are studied via in situ tests and numerical ...

The paper presents typical examples of pile integrity testing and the results analysis, whereby the testing methodology relies on existing ASTM standards, as well as on the testing methodology

In this paper, the new flexible photovoltaic support structure is summarized, and the related research articles on the structural design model and wind-induced effect of the flexible ...

This study focuses on the pile foundation design of offshore photovoltaic foundations, which are characterized by smaller pile diameters, larger aspect ratios, and the need for higher ...

A pull test needs to be done before installing helical piles to determine the embedment depth and ensure there is enough resistance to satisfy the load requirements of ...

The tracking photovoltaic support system is a distinctive structure that adjusts its inclination to maximize energy yield and exhibits significant aeroelastic behavior, akin to long ...

In this paper, we mainly consider the parametric analysis of the disturbance of the flexible photovoltaic (PV) support structure under two kinds of wind loads, namely, mean ...

TLDR. The present study contributes to the evaluation of the deformation and robustness of photovoltaic module under ocean wind load according to the standard of IEC 61215 using the ...

The utility model discloses a flexible photovoltaic support end anchor device applied to mountainous regions, which relates to the technical field of photovoltaic auxiliary equipment ...

Hillside photovoltaic flexible support pile test

Zoning The objective of the Pull Out test is to evaluate the behavior of the profiles used in the support structures of the tables or panels of a photovoltaic installation, based on the characteristics of the ...
