How much does a good power supply cost?

A good power supply usually costs around \$40-\$45. Linus Tech Tips recommends getting a 1060 3GB graphics card, which would save about \$60-\$80 on the graphics card, and then using the saved money for the power supply. This would provide a reliable power supply with an 80+ bronze rating.

What size power station do I Need?

Power stations come in all shapes and sizes, from palm-sized 150Wh packs to 2000Wh+ beasts meant for RVs. Here's a quick cheat sheet based on your trip style: Keep in mind: A 500Wh station is enough to power a fridge overnight with some extra headroom. A 1000Wh+ model is ideal if you need multi-day autonomy without recharging.

How do I set up a power supply concurrently?

Choose and list essential devices that you want to be able to power concurrently. Check the manual or data plates of each device to find the running watts of each device listed, add them and record that number. Find the starting watts of each device listed and record that number. Choose the device with the highest starting watts.
