How many solar panels can be installed on a roof?

You'll need to pay attention to specific measurements, particularly if you want to install the largest number of panels on your roof. The average size of a solar panel is three feet by five feet. This will allow you to have a rough estimate of how many panels you can accommodate.

Should I choose solar panels if I have a large roof?

If your home is small or has an unusually shaped roof, the power output and efficiency of your solar panels are especially important to consider. With a large roof, you can probably choose less efficient solar panels because you have more space for more panels.

Can solar panels be installed on a roof with less than 10 years?

Our solar professionals model different scenarios to find the right balance between system size and budget comfort. Installing solar panels on a roof with less than 10 years of remaining life is false economy.

How many solar panels do I Need?

Standard Efficiency Panels (350-400W) These panels represent the most budget-friendly solar options and work well for homes with ample roof space. Modern standard efficiency panels from quality manufacturers deliver reliable performance at lower upfront costs. For a typical 7 kW system, expect to need 18-20 panels in this category.
