How do you measure a solar panel voltage?

To measure your solar panel's voltage, start by setting your digital multimeter to DC voltage mode (typically marked as "V" with a straight line). Most residential solar panels have a maximum voltage of solar panels between 30-45 volts, so set your meter's range accordingly.

How do I test a 18V solar panel voltage output?

To test a 18V solar panel voltage output directly, put your solar panel in direct sunlight, set your multi-meter to the DC "volts" setting.

How do I measure PV current?

Note: You can more easily measure PV current by using a clamp meter, which I discuss below in method #2. That's right -- you can use a multimeter to measure how much current your solar panel is outputting. However, to do so your solar panel needs to be connected to your solar system.

How do you test a solar panel with a multimeter?

How to Test a Solar Panel with a Multimeter Your multimeter is your best friend when testing solar panels. You can use it to check: Here's how: Multimeter -- I recommend getting one that is auto-ranging. Also, a simple voltmeter won't work here. You need a multimeter that can measure both volts and amps.
