The output of this research is that the Off Grid PLTS system can produce maximum electrical energy so that it can overcome partner problems in increasing the turtle population.

He is recommending a legitimate way to have your turtle tank not run from the boat batteries. You would buy this kit then assemble it outside where the sun is so you can power your tank inside.

Together with subcontractors, motan donated solar panels for roofs to create a substitute for fuel energy. This new solar energy is also used to power a water pump installed by motan, which ...

Today I used waterfall foam to transform my small plastic 20-gallon pool, into a magnificent DIY turtle pool pond! Pool ponds are hard to make them look nice...

They've had one for a long time. But it recently (1-2years ago) moved to the north end of the island to a beautiful, state of the art facility. I work for a solar company, but they loved our work ...

The excess power from the farm is then used in two ways: either to generate clean solar electricity or to produce heat that can be used in the water circulation system, ultimately improving ...

The ASU researchers are comparing the numbers of turtles, sharks, and other species caught in nets on days with or without solar-powered lights. They are also gathering observations of ...

You must provide a "basking dock" or "turtle topper" that allows your turtle to get 100% dry. It should be stable, easy for them to climb onto, and positioned directly under the heat and UVB ...

While lighted nets can reduce the bycatch of sharks and sea turtles, their batteries are short lived, expensive to replace, and not always easy to dispose of. The lights themselves are also...
