-----

SheerWind's INVELOX(TM) system (named for INcreased VELOCITY) is a cost effective, high performance electrical energy generation system. The funnel shaped shroud system captures wind to deliver it to ...

The first wind power generation system, namely INVELOXTM, with three turbines is presented in this paper. This breakthrough technology is often referenced as "The New Face of Wind Power." ...

A new concept in wind power harnessing is described which significantly outperforms traditional wind turbines of the same diameter and aerodynamic characteristics under the same wind ...

the hallmark of today's wind power industry. They are also expensive, unwieldy, inefficient, and hazardous to people and wildlife. The second innovative feature of INVELOX is that it captures wind ...

The document describes a new wind power concept called INVELOX that aims to significantly outperform traditional wind turbines. It has three innovative features: 1) It eliminates tower-mounted ...

Instead of capturing bits of energy from the wind as it passes through the blades of a tall erected rotor, INVELOX technology captures wind through a funnel system and directs it through a tapering ...

Increase velocity in omnidirectional (INVELOX) is the wind power transporting system, which is suitable for providing the maximum wind energy for better maneuver of wind turbine.

In order to interface between off-the-shelf wind turbines and low-quality wind, the Increased velocity (INVELOX) wind delivery system is an attractive wind augmentation option for such regions.

This paper seeks to review and simplify the advances done by various scholars towards improving the INVELOX delivery system. It provides the mathematical foundation on which these advances are ...
