To enhance the reliability of distributed power generation and facilitate its efficient integration with the power grid, microgrid technology has been identified as an effective solution that has garnered ...

resources as a real application at the Universidad Pontificia Bolivariana (UPB) campus microgrid. The simulated and physical microgrid characteristics are described and the hourly dispatch results for ...

This study evaluated the design and optimization of an islanded hybrid microgrid system with multiple dispatch algorithms. As the penetration of renewable power increases in microgrids, the importance ...

This section aims to provide an overview of recent studies that have explored the applications of these algorithms for the economic dispatch problem in microgrids.

To address these challenges, this paper proposes an optimized scheduling strategy for microgrids based on hybrid, multi-type data-driven methods. First, a multi-stage model is developed ...

The simulated and physical microgrid characteristics are described and the hourly dispatch results for generation, storage and load devices are presented, standing out as a reliable ...

To minimize the environmental and total operating costs of the micro-grid intelligent scheduling system during grid connection, this study proposes a micro-grid intelligent scheduling ...

To fill in the existing research gaps identified above, this paper discusses a two-stage microgrid dispatching framework with an improved ADP to deal with uncertainty of renewable ...

Based on the aforementioned research, this paper constructs a microgrid power dispatch model that includes wind energy, solar energy, gas, diesel generation, and energy storage units.

Microgrid dispatching principle and application

In this paper, the metric of survivability is used from (Nelson et al., 2020) to describe the resilience of microgrid operations as a probability that critical load on the system will be served ...
