Solar producers across Northern Asia miss out on While El Nino typically delivers warmer than average temperatures to Northern Asia, analysis from the Solcast API of conditions from December to ...

Search, filter and download the IEA's library of charts and figures, spanning the full range of IEA analysis

A notable shift in solar irradiance patterns across East and Southeast Asia was observed in September, with a clear split in outcomes across China and emerging La Niña signals in the tropics.

Five Asian countries among top ten solar powered economies globally. A decade ago, only two countries in Asia made it to the list, while European countries dominated the top of the global solar ...

Specializing in integrated solar-storage solutions since 2015, we've deployed over 12,000 residential systems across North Asia. Our modular battery designs adapt to diverse climates from Hokkaido to ...

According to Cognitive Market Research, the China Solar Energy market size was valued at USD 9879.2 million in 2024 and is projected to grow at a CAGR of 8.0% during the forecast period. Solar ...

Global data representing the solar resource and PV power potential has been calculated by Solargis, and released in the form of consistent high-resolution data layers. To set the scene, we characterize ...

This study discusses solar irradiance variability using solar irradiance data analyzed every 10 min from high-temporal observations of geostationary satellites in the Asia-Pacific region.

This study explores the growth of solar power in seven key Asian countries, the potential for future growth and the avoided fossil fuel costs due to solar electricity generation between January ...

Northern Asia's solar producers missed out on the expected energy generation bump from El Niño, while other parts of Asia enjoyed above-average irradiance.
