-----  
How many modules can a cabinet support?

Cabinets are available in a variety of sizes. The smallest (CAB5), in addition to the 3-CPU1 module and primary power supply module, supports 2 rail modules and 3 control/display modules. The largest, the CAB21 supports as many as 18 rail modules and 19 control/display modules.

Can a module be installed with power applied to a cabinet?

Caution: Never install or remove a module or cabinet component with power applied to the cabinet. Circuit compatibility The following circuit compatibility matrix indicates which circuit types may occupy the same conduit or be bundled together, where permitted by code. Installation EST3 Installation and Service Manual 2.3

Do I need to send reset and alarm silence information to other cabinets?

Again, there is no need to send reset, alarm silence, trouble silence, drill, and acknowledgment information to other cabinets from cabinets 3 and 4. The Cabinet 5 entry under the Cabinet State column indicates that Cabinet 5 receives its change of state information from cabinets 3, 4, 5, and 6.

Do cabinets 3 and 4 receive change of state information?

Cabinets 3 and 4 receive their change of state information from all cabinets on the network, as indicated in the cabinet state column. This is necessary as cabinets 3 and 4 are part of both domains. Again, there is no need to send reset, alarm silence, trouble silence, drill, and acknowledgment information to other cabinets from cabinets 3 and 4.
