Hot-Dip Galvanized Steel PV mounting structure designed and manufactured by HDsolar, adapt to the specific conditions of each project (terrain, calculation standard, climate conditions, etc.) ...

We can customize products according to customers' specific requirements, including specifications, colors, packaging, etc. Detailed technical parameters and requirements need to be provided.

In short, there are many technical difficulties in the production process of the assembled section steel bracket, which requires metallurgical engineering and technical personnel to overcome technical ...

After fabrication, structural steel shall be adequately coated and protected by hot-dip galvanizing. The thickness of the hot-dip galvanizing shall comply with EN ISO 14713 and ISO 1461, ...

Our brackets are made of high-quality hot-dip galvanized steel, which has strong corrosion resistance and can maintain long-term stability in harsh weather and environment, especially suitable for humid, ...

According to the requirements of national standards, the average thickness of the galvanized layer should be greater than 50mm, and the minimum thickness should be greater than 45mm. ...

Can it be customized to non-standard module sizes? Absolutely, both the structure and module arrangement can be tailored to customer specifications. What kind of anti-corrosion treatment is ...

At present, there are generally two types of solar brackets: carbon steel and aluminum alloy, and carbon steel is treated with hot-dip galvanizing (aluminum alloy generally adopts anodizing ...

The product quality and design and installation requirements of photovoltaic brackets must comply with the climate environment, building regulations, photovoltaic power ...

Photovoltaic bracket hot-dip galvanizing thickness requirements

The installation area of Hot-Dip Galvanized Steel photovoltaic bracket can be ground screw, concrete foundation, C-shaped steel pile or H-shaped steel without geographical constraints, applicable ...
