This reference design is a solar charger and energy harvester using a highly integrated power management solution that is well-suited for ultra-low power applications.

The internal logic works to guarantee tight monitoring of both the end-of-charge voltage (VEOC) and the minimum battery voltage (VUVP) by opening the pass-transistor at triggering of the VEOC threshold ...

ST's SPV1050 is an extremely high-efficiency power-management and battery-charger solution for wireless sensor nodes that harvests energy from both photovoltaic cells and thermoelectric ...

This article illustrates design tips for a solar panel charger with a Lithium-ion battery, suitable for applications such as outdoor solar surveillance cameras or outdoor lighting (see Figure 1).

The NEH7100 is a high-performance power management IC (PMIC) for energy harvesting solutions in low-power applications. It has a rich set of auxiliary features, such as storage element protection, ...

This paper presents the modeling, design, and implementation of a rapid prototyping low-power solar charge controller with maximum power point tracking (MPPT). The implemented circuit ...

The bq24210 device is a highly integrated Li-Ion linear charger targeted at space-limited portable applications. The battery is charged in three phases: conditioning, constant current and constant ...

This class will help you understand how to deal with the dynamic impedance of solar cells, apply power-point tracking algorithms, sizing your battery and solar array, and negotiating between tracking ...

And I found CN3165, a solar powered MPPT based single cell battery charging IC with protection features. I searched for some web documents and found this amazing DFRobot Solar Power ...

Photovoltaic panel charging management IC

The EV kit features an on-board adjustable current source and a monocrystalline solar cell to generate input current to the IC. It also features a supercapacitor and resistor load to evaluate the integrated ...
