As a building-integrated photovoltaic (BIPV) system, Solar Roof's performance is designed and evaluated as both a roof construction material and as a photovoltaic product.

In Europe, the Energy Performance of Buildings Directive (EPBD) includes legal requirements for buildings to meet stepwise improvements in energy efficiency (with among other things, insulation) ...

Although the provisions covered in this publication also apply to new construction, it was developed primarily for building owners/managers looking to retrofit existing buildings with BAPV ...

The developed methodology aimed at optimizing roof insulation and determining the cost-effectiveness of installing PV (with and without electrical storage) in different building prototypes, as ...

Complex roof shapes and incompatible roofing materials make installing an efficient system more difficult. In this column, three designers speak to the best way to plan for and ...

Building owners and industry professionals are increasingly considering and using solar panels as a preferred method of energy production in their buildings as efficiencies increase. Designers must ...

Roofs at every level shall be provided with a sustainable roofing zone pursuant to LL 92 and 94. Each contiguous roof area shall be evaluated individually and be provided with either a green roof system ...

structured around GAF commercial roofing systems and impacts of solar installation. Where applicable, GAF will provide specific GAF solar flashings, . t may be beneficial to the designer and building ...

Obtain professional advice on the roof/building structural stability and condition, to ensure the roof/building can support the additional weight of the PV panel array and still have an additional ...

Photovoltaic panel roof insulation construction plan

Sika can advise how to make your solar PV roof perform optimally, ensuring not only that the PV panels are mounted correctly, but also that the entire roof assembly is designed incorporating vapor ...
