---

Within days of a nascent Opec-style agreement by Chinese solar photovoltaic (PV) manufacturers to end a bruising price war and curb oversupply, the pact was on the brink of unravelling.

Many photovoltaic solar power plants were significantly impacted by the disaster, resulting in extensive damage to photovoltaic modules and ancillary equipment.

This study utilizes Landsat imagery to analyze the spatiotemporal changes of PV distribution in China's coastal regions, and assesses the effect of typhoon disasters to PV. Key ...

These inverters, critical for integrating solar panels, wind turbines, and batteries into electricity grids, have been found to contain undocumented components capable of bypassing firewalls and ...

Thousands of people are forced to work under guard and constant threats in mines and factories producing polysilicon, a key input in the production of solar panels.

Amid accusations of human rights abuses and forced labour in Xinjiang, initiatives like the United States' Uyghur Forced Labour Prevention Act and potential European Union regulations are ...

U.S. energy officials are reportedly reassessing the security risks posed by Chinese-made components in renewable energy infrastructure after discovering hidden communication ...

The two people declined to name the Chinese manufacturers of the inverters and batteries with extra communication devices, nor say how many they had found in total.

On January 13, 2024, a fall from height occurred at the factory of Zhaoqing Xinlianchang Metal Co., Ltd. while installing and laying solar photovoltaic panels on the roof, resulting in one death.

# Photovoltaic panels hit people in Liuhuang

At a meeting of the Green Climate Fund (GCF), China's board representative Yingzhi Liu objected to six projects because their risk assessments highlighted the potential of forced labour use ...
