-----

EIA projects that PV's growth in 2023 (27 GWac) and 2024 (36 GWac) will continue in 2025 (39 GWac) and remain at similar levels in 2026 (36 GWac). In 2024, 24 states and territories ...

Photovoltaic (PV) solar accounted for 58% of all new electricity-generating capacity additions through the third quarter of 2025, remaining the dominant form of new electricity-generating ...

Solar power utilizes the sun's energy as either thermal energy (heat) or photovoltaic cells in solar boards and clear photovoltaic glass to create power. The aggregate sum of solar energy ...

Each quarter, the National Renewable Energy Laboratory conducts the Quarterly Solar Industry Update, a presentation of technical trends within the solar industry.

Meeting international energy and climate goals requires the global deployment of solar PV to grow on an unprecedented scale. This in turn demands a major additional expansion in manufacturing capacity, ...

The photovoltaic solar energy sectors play a critical role in transitioning toward sustainable energy solutions. Each sector, whether utility-scale, commercial, residential, or off-grid, ...

In 2020, the International Energy Agency declared that solar photovoltaics had become "one of the lowest cost sources of electricity in history", although costs continue falling.

Our study defines the global solar energy market as all grid-tied and certified off-grid photovoltaic (PV) and concentrated solar power (CSP) plants whose cumulative installed capacity is ...

Across all regions, developing a skilled workforce and setting ambitious solar and storage targets are essential tasks. In these times of political uncertainty, low-cost solar power could turn into ...

Find up-to-date statistics and facts on the global solar photovoltaic industry.
