To be exact, in the last six months, renewable energy accounted for 53% of the Netherlands' total electricity production, reports the Dutch Bureau of Statistics (CBS).

For the first time, in 2024, more than half of the electricity produced in the Netherlands came from renewable sources, and almost all of it (45%) from solar and wind.

Find the most up-to-date statistics and facts about renewable energy in the Netherlands

For the first time, more than half of electricity production in the Netherlands comes from renewable sources, such as wind and solar energy, Statistics Netherlands (CBS) reported.

Nearly 80% of solar power installed in the Netherlands in 2017 was for small systems of less than 10 kW, a large part being rooftop Solar PV. Larger systems over 500 kW accounted for just 6.9% of the total. By the end of 2018 private residential rooftop systems had an installed capacity of 2,307 MW, businesses rooftop systems 1,662 MW whilst solar parks amounted to 444 MW.

Design a detailed PV system for any location within the Netherlands and let the model calculate the performance and economics of this system. The calculations are based on the real-time ...

In 2023, 48 percent of electricity was generated from renewable sources such as solar, wind and water. Between May and July, over half of the electricity generated in the Netherlands was ...

The current percentage of electricity generation from solar in the Netherlands is 18.3%, which has increased by 1.9% (11.8%) since 2023.

The Netherlands may rely heavily on offshore wind for green energy, but the solar sector has also seen remarkable growth. Cederik Engel, Managing Director of CCE The Netherlands and ...

# Proportion of solar power generation in the Netherlands

Netherlands"s electricity mix includes 35% Gas, 23% Wind and 19% Solar. Low-carbon generation peaked in 2024.
