What is the optimal configuration of battery energy storage in grid-connected microgrid?

The optimal configuration of battery energy storage system is key to the designing of a microgrid. In this paper, a optimal configuration method of energy storage in grid-connected microgrid is proposed. Firstly, the two-layer decision model to allocate the capacity of storage is established. The decision variables in outer programming

How to configure energy storage in grid-connected microgrid?

In this paper, a optimal configuration method of energy storage in grid-connected microgrid is proposed. Firstly, the two-layer decision model to allocate the capacity of storage is established. The decision variables in outer programming model are the capacity and power of the storage system.

What are the constraints on reliability performance of microgrid system?

Therefore, the expression of constraints on reliability performance of microgrid system is shown as, (14) $Q_C = Q_{FC} + Q_{RC}$ $Q_{RC} \geq Q_{RCmin}$ where Q_{FC} represents flexible energy storage capacity, Q_{RC} stands for rigid energy storage capacity, Q_{RCmin} represents the minimum rigid energy storage capacity during off-grid operation.

How to optimize the capacity configuration of microgrids?

For example, artificial bee colony algorithm, grey wolf optimization algorithm, bat search algorithm, genetic algorithm have been widely used in optimizing the capacity configuration of microgrids. However, most of these studies have not simultaneously considered collaborative optimization of planning and operation.
