Where does Romania import electricity?

Romania exports and imports electricity to and from neighboring countries, including Hungary, Bulgaria, Serbia, Ukraine, and Moldova, and is also part of the European Union's internal energy market, which aims to create a single, competitive market for electricity and gas across EU member states.

Who is the largest solar module manufacturer in Europe?

When looking into the European solar module value chain, the largest manufacturer remains the only one active in the solar silicon segment. Wacker Chemie is the sole EU company to operate polysilicon production facilities with a capacity of around 60,000 metric tons in Germany, which translates into over 26 GW of cell/module products.

Does Romania have solar power?

Romania is undergoing a significant expansion in solar power within its broader energy transition framework, bolstered by European funding and legal reforms.

Will a large PV project be able to grow in Romania?

Large PV projects planned on agricultural lands exceeding 50 hectares still face obstacles from the Ministry of Agriculture and Rural Development (MARD) to secure permitting, among others. If not lifted, our high growth expectations, leading to a quadrupling of Romania's total PV capacity to 8.7 GW within four years, are at risk.

Recycling of panels is key to creating a resilient and sustainable value chain, particularly as the process can recover key raw materials in manufacturing processes.

For more detailed PV insights and analysis of the European solar market, including emerging trends and future projections, refer to the full Europe Solar Supply Chain Map Edition 1 - 2025.

Romania Solar Cell and Module Industry Life Cycle Historical Data and Forecast of Romania Solar Cell and Module Market Revenues & Volume By Type for the Period 2021-2031

Apart from the two EU-based cell/module manufacturers that produce cells for internal consumption, a large

Romania exports solar modules to Belgium

number of EU module manufacturers have decided not to manufacture their cells but instead ...

Romania's growing solar market is built on its alignment with European Union energy objectives. This high-level support translates into specific, bankable programs that create stable and ...

Romania is undergoing a significant expansion in solar power within its broader energy transition framework, bolstered by European funding and legal reforms.

Romania exports and imports electricity to and from neighboring countries, including Hungary, Bulgaria, Serbia, Ukraine, and Moldova, and is also part of the European Union's internal ...

The Innovation Fund has selected solar PV manufacturing projects for a total of 400 million EUR and made 1.4 billion EUR available in its 2023 call for clean tech manufacturing, including solar PV.

This latest report highlights the rapid changes taking place at European manufacturing facilities and across their supply chains. These shifts, while often necessary, can introduce ...

These facts are updated till 18Feb2023, and are based on Volza's Romania Export data of Solar module, sourced from 70 countries export import shipments with names of buyers, suppliers, ...
