What is a base station and how are 4G/5G base stations different? Base station is a stationary trans-receiver that serves as the primary hub for connectivity of wireless device communication.

In 2009, American Samoa was connected to the Internet using the American Samoa Hawaii Cable (ASH) undersea communications cable that increased bandwidth from 20 Mbit/s to 1 Gbit/s. The project used a defunct PacRim East cable built in 1993 that previously connected Hawaii with New Zealand. The cable system now connects Samoa to American Samoa and then to Hawaii where it will connect to global submarine networks. In July 2018, the Hawaiki cable was activated with a branch providing a 200 Gb/...
