Aligned with global trends, the installed solar photovoltaic capacity in Latin America and the Caribbean has greatly increased in the last decade, surpassing 85 gigawatts in 2024.

Small-scale projects (<5 MW dc) will account for 48% of the total regional buildout, as distributed generation schemes remain attractive across the continent. Regional PV installations are ...

In this context, South American countries are developing sustainable actions/strategies linked to implementing solar photovoltaic (PV) and concentrated solar power (CSP) facilities and ...

In this article, we'll delve into why mobile solar generators are poised to shape the future of energy in South America, with a particular focus on the role that Sunpal Solar is playing in this ...

This research aims to highlight a summary of different aspects of connecting photovoltaic systems to the grid in eight countries in South America with similar socioeconomic development.

Furthermore, the insights gained will assist in designing and modelling larger-scale floating solar and hydroelectric systems to maximise their generation potential, both in Colombia and ...

South America's solar power generation system is rapidly evolving, driven by abundant sunlight, supportive policies, and growing energy demands. With countries like Chile, Brazil, and Colombia ...

Today we look at the grids of Chile, Brazil, and Colombia, all of which have already made solar a cornerstone of their generation or are working to do so in the near future.

Regional PV installations are expected to peak in 2024 as small-scale and utility-scale solar additions slow in Brazil. Despite this, growth is expected in emerging markets, such as Colombia...
