What is a micro-inverter solar panel?

Rather than a large, central string inverter, a micro-inverter is a small DC-AC converter that is connected to the back of each solar panel. The primary benefits of the micro-inverters is that they can deliver up to 25% more power than conventional inverter systems. They are ideal for areas where shading may be an issue affecting performance.

Do solar panels need micro-inverters?

Solar panels get all the glory, but it's the micro-inverters that do all the work, unlike the conventional inverters, micro-inverters provide flexibility and optimization for your photovoltaic system.

How much does a micro inverter cost?

They typically cost \$1,000 or more than a string inverter on a standard 5kW residential solar installation. However, they allow for a much easier system expansion than a string inverter and ensure greater energy savings. It means that in the long term, micro inverters for solar systems may turn out to be cheaper than conventional inverters.

Is eco-worthy micro-inverter a good choice?

Eco-Worthy micro-inverter is a very stable and reputable inverter it's ranked #4 in best sellers rank in the Solar & Wind Power inverters, you can't go wrong buying this inverter. For this micro-inverter to produce efficient results, it's necessary to pair it with a 600W solar panel.

The 300-400kWh of power generated by the MIK-PLUS solar kit is perfect for those looking to offset some, if not all of their electricity usage, depending on how conservative you are. Includes free shipping!
