In our latest Short-Term Energy Outlook (STEO), we expect that U.S. renewable capacity additions--especially solar--will continue to drive the growth of U.S. power generation over the next ...

Here we use data-driven conditional technology and economic forecasting modelling to establish which zero carbon power sources could become dominant worldwide.

This plan marks our progress toward that ultimate goal and identifies what is needed to reach 100% clean electricity by 2045. It outlines what we can expect in the years ahead, as we begin the next ...

To help unlock the potential of renewables and ensure a reliable, resilient grid, we consider a tri-phased scaling strategy. This strategy navigates progress in three distinct phases, each building upon the ...

The report finds that 77% of all solar capacity installed this year has been built in states won by President Trump, including 8 of the top 10 states for new solar installations: Texas, Indiana, ...

ble, environmentally sustainable, and equitable grid. The portfolio of grid modernization work helps integrate all sources of electricity, improve the security of our Nation's grid, solve challenges of ...

Topics highlighted in this report are intended to illustrate some areas of emerging promises or needed work and are not comprehensive of challenges for power system transformation.

Total global renewable power generation capacity - a key energy transition driver on the supply side - will need to more than triple from the 2022 level under the 1.5 ° C Scenario, with solar PV and wind ...

As part of the Earth Day events, it has launched initiatives to boost the nation's electric grid infrastructure, including a final rule to streamline the permitting and approval of large ...

Solar power generation upgrade and transformation plan

By 2050 solar PV would represent the second-largest power generation source, just behind wind power and lead the way for the transformation of the global electricity sector.
