In Q1 2025, China's wind and solar capacity surpassed its thermal (coal and gas) capacity for the first time, supplying nearly 23% of the country's total electricity consumed, up from roughly 18% in Q1 of ...

power system dominated by solar and wind energy presents immense challenges. Here, we demonstrate the potential of a globally interconnected solar-wind system to meet future electricity

By calculating the Kendall rank correlation coefficient between wind and solar energy in China, the study mapped the spatial distribution of wind-solar energy complementarity.

Are wind and solar energy complementary? Given that wind and solar energy are distinct forms of energy within the same physical field and are typically developed simultaneously in clean ...

A globally interconnected solar-wind power system can meet future electricity demand while lowering costs, enhancing resilience, and supporting a stable, sustainable ...

In order to improve the utilization efficiency of wind and photovoltaic energy resources, this paper designs a set of wind and solar complementary power generation ...

Are wind power and solar PV power potential complementary? The assessment results of temporal volatility of wind power and solar PV power potential in different regions of China show that they can ...

This work proposes a stochastic simulation model of renewable energy generation that explores several complementary effects between wind and photovoltaic resources in ...
