The goal of this project is to overcome Japan's issues related to wind power generation by developing innovative technologies that contribute to further cost reductions and thereby increase ...

A globally interconnected solar-wind power system can meet future electricity demand while lowering costs, enhancing resilience, and supporting a stable, sustainable ...

Accelerating energy transition towards renewables is central to net-zero emissions. However, building a global power system dominated by solar and wind energy presents immense challenges. Here, we ...

Since its founding in 1999, JWD has been fully involved in wind power development -- from site selection to long-term maintenance -- offering a seamless process that covers legal approvals, ...

Modular solar power station containers represent a revolutionary approach to renewable energy deployment, combining photovoltaic technology with standardized shipping ...

HJ-SG Solar Container provides reliable off-grid power for remote telecom base stations with solar, battery storage and backup diesel in one plug-and-play solution.

A project between Japanese green tech startup PXP Inc and Tokyo Gas Co is developing a film-type solar cell for installation on industrial roofs with low load-bearing capacity.

This large-capacity, modular outdoor base station seamlessly integrates photovoltaic, wind power, and energy storage to provide a stable DC48V power supply and optical distribution.
