The UK's Clean Power 2030 Action Plan, published by DESNZ, outlines a strategy to achieve a sustainable energy system by 2030. It sets ambitious renewable energy targets, including ...

Clean Power means that by 2030, Great Britain will generate enough clean power to meet our total annual electricity demand, backed up by unabated gas supply to be used only when ...

The United Kingdom is facing a significant shortfall in its efforts to transition to clean electricity, raising serious concerns about the country's ability to meet its legally binding climate targets.

By 2030, the government aims to meet Britain's electricity demand with energy from clean sources. 64% of British electricity currently comes from clean sources.

Britain aims for a clean power system by 2030, with offshore wind supplying the majority of electricity and gas-fired power reduced to below 5%. In Northern Ireland, 80% of electricity ...

Following independent advice from the National Energy System Operator (NESO), the government is aiming for clean power to meet 100% of electricity demand by 2030, with at least 95% ...

Electricity demand on the island of Great Britain has been fully covered by the output of clean-energy sources for a record 87 hours in 2025 to date, new Carbon Brief analysis shows.

Britain is expected to fall short of the progress needed to meet its climate targets over the next decade because it is not growing its supply of clean electricity quickly enough, according...

The Government has set a target of reaching 95% clean power by 2030, and this is the first time that official statistics on progress towards CP2030 have been published. The statistics were ...

By 2015, the UK ranked third in the G7 for clean electricity share - a position it still holds today - behind only
