Easily integrates with both automotive and stationary battery chemistries, featuring a comprehensive cell module controller and cell supervision circuit (CSC) for seamless operation.

In a lithium battery pack, the cell contact system is the electrical connection module that connects the battery cells and the BMS (battery management system).

What is a Cell Supervisory Circuit (CSC)? An essential component of a battery management system (BMS) used in electric and hybrid vehicles, the cell supervisory circuit has big ...

The STW.csc (Cell Sensor Circuit) monitors the individual cells of the battery through the measurement of voltage, temperature and SOC. Every STW.csc is equipped with a passive discharge path in order ...

The Battery Workforce Challenge collegiate competition is a three-year engineering competition that challenges North American universities and their community college partners to design, build, test ...

Used as the top cover to the battery pack, it provides temperature sensing and voltage sensing of the battery cells, as well as high voltage connectivity, via the busbars, across the battery pack/cells.

Innovative flexible PCB design, allows diferent circuit variants in multi-layer design Highly automated CCS assembly lines CCS solutions scalable in size, from module CCS solutions to large format CCS ...

The "Cell Supervision Circuit" CSC board is responsible for monitoring the temperature and cell voltage. One CSC board is used per battery module, which usually consists of 7-14 cells.

CCS, short for Cells Contact System, refers to an integrated busbar system that combines conductive busbars, control circuits (such as voltage and temperature sensors), and other ...
