"Europe is not building enough new wind farms. For 3 main reasons - a) most governments are not applying the good EU permitting rules - they've got to follow Germany's ...

The turbulence in the European wind market is ill-timed, coming as the bloc must start replacing or upgrading its original generation of aged wind farms. According to WindEurope, an ...

"Europe is not building enough new wind farms. For 3 main reasons - a) most Governments are not applying the good EU permitting rules - they've got to follow Germany's ...

Europe's efforts to expand wind power capacity are falling short of the levels required to meet the European Union's 2030 climate and energy targets, despite wind power providing 20% of ...

As of 2024, the EU's wind capacity and generation remain on an upwards trend. WindEurope (formerly known as The European Wind Energy Association) has estimated that 230 gigawatts of wind ...

Offshore wind power generation offers important advantages: a high number of operating hours, low variability and, consequently, lower forecast errors and lower balancing costs compared to ...

A thriving wind industry is key for securing Europe's competitiveness and lower, more stable energy prices. Bureaucracy, unviable project economics and grid bottlenecks are currently ...

WindEurope warns Europe is falling behind on wind power capacity. New 2025 data shows Germany leading the way, while most EU countries struggle with permits and grid expansion.

WindEurope CEO Giles Dickson emphasized the urgency, stating, " Europe is not building enough new wind farms. The EU must tackle permitting issues, grid delays, and slow electrification to accelerate ...

# Why doesn't Europe develop wind power generation

Wind energy powered 20% of all electricity consumed in Europe in 2024, but there are three things threatening the EU's 50% wind by 2050 goal.
