---

Percentage change in wind energy generation relative to the previous year. Data source: Energy Institute - Statistical Review of World Energy (2025) - Learn more about this data. Figures ...

See the projected growth of the wind industry over the next 35 years. All units are in gigawatts (GW). Only states with total capacity over 0.1 GW are included per year. Find out more about the data by ...

US electricity generation from wind turbines decreased for the first time since the mid-1990s in 2023 despite 6.2GW of wind capacity being installed in the past year, according to data ...

Annual US power generation from wind turbines declined in 2023 for the first time since the mid-1990s - here's why.

In 2023, the total amount of power U.S. turbines could theoretically produce reached a record high, according to an analysis from the Energy Information Administration. But wind plants ...

Wind farms are the country's largest source of renewable electricity, and their output was down 2.1 percent in 2023 compared to the prior year. The results varied a lot by state.

Despite the installation of more and more wind turbines, wind production declined in July to a 33-month low. Wind production also declined in 2023 from the year before despite 7 gigawatts of ...

In 2023, the landscape of wind power in the United States experienced a notable shift. For the first time since the 1990s, the production of electricity from wind experienced a decline. This ...

Wind turbine generation in the U.S. declined in 2023, the first time since the mid-1990s, even with the addition of 6.2 GW of new wind capacity, according to the U.S. Energy Information...
