China's total installed power capacity is forecast to reach about 4.3 terawatts by the end of 2026 as China expects 300 GW to come from primarily wind and solar.

Use WeatherPower graphics to show daily wind and solar electricity generation based on weather of the day and installed capacity in your area.

By 2030, renewables are poised to supply nearly half of global electricity, with solar and wind leading this explosive expansion. In this data-driven piece, we explore job creation forecasts, ...

Solar and wind are growing fast enough to meet all new electricity demand worldwide for the first three quarters of 2025, according to new data from energy think tank Ember.

Created using global weather data to deliver high-resolution, bankable historical and accurate forecast data for the renewable energy industry. Globally validated.

As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from 163 billion kilowatthours (kWh) in 2023 to 286 billion kWh in ...

Among all technologies, wind is impacted most, with both offshore and onshore capacity growth revised down by almost 60% (57 GW) over the forecast period. The forecast for solar PV capacity has been ...

In 2026, the country is forecast to commission 235 GW of solar PV and 98 GW of wind capacity. This will take global added renewable power generation capacity from 703 GW in 2025 to ...

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.

Wind and photovoltaic power generation forecast

For the first time, the Report has conducted an annual forecast of global new energy generation capacity, noting that global wind power and photovoltaic generation capacity will increase ...
