To address the bottleneck issues in wind turbine generator control systems in the field of new energy equipment and achieve the autonomous development of wind power industry libraries, ...

In this article, an optimal controller is proposed to extract maximum wind energy from the available wind speed. The very fluctuating nature of wind speed has made the process of extracting ...

Thus, our work has proposed a PLC controller in which the power generated from a hybrid wind-solar power system is received then optimized by the Hybrid optimization algorithm called hybrid Bat ...

First of all, the wind power generation control system needs to monitor the operation status and environmental conditions of the wind turbine in real time. For this purpose, the system installs several ...

Next-generation wind turbine control systems are evolving with intelligent automation, predictive monitoring, and grid-aware design to drive efficiency, resilience, and sustainability in the ...

PLC Link customers feel assured knowing that DEIF uses the tool internally for all the important control algorithms in the turbine, for positioning the turbines blades, rotor speed and power; not to mention ...

The trouble of global energy shortage is becoming increasingly severe, and environmental factors are becoming increasingly necessary for social development.

This paper mainly discusses the design of PV/wind hybrid generation control system based on PLC.

This paper shows path of controlling hybrid system with wind and diesel generators via a programmable logic controller, these systems produce the required electrical power from different...

First of all, the wind power generation control system needs ...

Wind power generation PLC control system design

Generator torque control, nacelle yaw control, and pitch control modules can be designed in the Simulink environment and simulated while making use of the complete nonlinear aeroelastic wind ...
