-----

The world's largest hydropower project, China's Three Gorges Hydroelectric Power Station on the Yangtze River has generated over 1,600 terawatt-hours (TWh) of clean electricity ...

The Yangtze, China's longest river, is home to six mega-hydropower plants: Wudongde, Baihetan, Xiluodu, Xiangjiaba, the Three Gorges Dam and Gezhouba. Together, they form a 1,800-kilometre ...

Now, a total of 110 hydroelectric generators are operational in the corridor, which supplies green electricity to Chinese manufacturers and households, setting a good example of sustainable...

The Three Gorges Dam, spanning the Yangtze River in Hubei province, China, is an engineering marvel and the world's largest hydroelectric power station. The project, which began construction in 1994 ...

The world's largest clean energy corridor along China's Yangtze River produced over 276 billion kilowatt-hours of electricity last year, up 5.34 percent year on year.

Installed with 110 generator units, the clean energy corridor has a total installed capacity of 71,695,000 kilowatts, equaling that of three Three Gorges Dam Projects. In addition to power ...

On December 21, the 1.2GW wind-solar power generation and storage base located in the southern part of Fuyang, Anhui, the first large-sized wind and solar power project in China's Yangtze River ...

After nearly half a century of planning and construction, the world's largest clean-energy corridor was completed in December 2022, with the Baihetan Hydropower Station, located in the ...

The Three Gorges Dam--located on the Yangtze River in China--is the largest hydroelectric dam in the world.

The Yangtze corridor is emerging as the world's largest clean-energy trade route, powered by HVDC, solar, and battery-electric vessels.
